Item Description FIELD

Site Data

This feature is an arable field which at the time of inspection had been ploughed, harrowed and sown and the new crop already germinating. The northern end of the field is level then slopes down to the south to form a valley which runs east to west, then there is a slope up to the southern boundary which abuts the Ripley Road. The underground culvert which crosses fields 0008 and 0009 continues across this field running along the valley bottom. There is no visual evidence of Pond 0145, Building 0146 or Field System 0151 which appear on early maps and aerial photographs. There is no visual evidence of archaeological features but the field holds large amounts of broken crockery and small lumps of coal.

History Summary

In mid 19th century the field was sub divided into 6 small fields and by the 1930's the two N fields were merged so the present field was now sub divided into 5 fields. This configuration was unchanged until the 1970's when the present field was created.
