### Description

Toy arrowhead with the arrow being comprised of copper alloy sheet. The wooden shaft survives in part; this is broken where the tang for the arrow ends. This shaft is composed of two semi cylindrical shaped pieces of wood held together by the remnants of resin and possibly textile at the base of the arrowhead. The wood encloses the tang and part of the base of the arrowhead. The arrowhead is crudely formed and slightly irregular (asymmetrical). The edges show signs of having been sharpened - they are slightly beveled. This item is probably from the 20th century but has been included as part of a larger assemblage.
